MEMORANDUM

Date: December 2, 2005

Subject: MSDS For Channel and Fittings

From: Unistrut Engineering

MSDS are required for Unistrut Channel, Telestrut and Threaded Rod since they can be modified by end-users by cutting, welding, burning, etc. as a normal use of the product. The applicable MSDS is dependent upon the material (e.g. carbon steel, stainless steel, etc.) and its finish (e.g. Perma-Green, Pre-Galvanized, etc.) MSDS for Unistrut Channel, Telestrut and Threaded Rod are available upon request.

Other Unistrut products are classified as an "Article" under the Hazardous Communication Standard (29CFR 1910.1200) and ARE EXEMPT FROM MSDS REPORTING REQUIREMENTS. These include:

- Channel Nuts
- Hardware (e.g. Cap Screws, Hex Nuts, Washers, etc.)
- General Fittings including Brackets, Braces and Beam Clamps
- Pipe & Conduit Supports including Clamps, Hangers and Rollers
- Electrical Fittings
- Concrete Inserts

An Article is not intended to be modified through normal use by end-users. 29CFR 1910.1200(c) defines an "Article" as a manufactured item which:

- 1) Is formed to a specific shape or design during manufacturing.
- 2) Has end use function(s) dependent in whole or in part upon its shape or design during end use.
- 3) Under normal use does not release, or otherwise result in exposure to a hazardous chemical under normal conditions of use.
